

## The Legacy of Quade Smith

A 7-year-old boy was diagnosed with a rare and fatal muscle-wasting disease.

In June of 2021 a 7 year old boy was diagnosed with Duchenne Muscular dystrophy

This disease is found in one out of 1-3500 male births.

Duchenne muscular dystrophy (DMD) is a genetic disorder characterized by progressive muscle degeneration and weakness due to the alterations of a protein called dystrophin that helps keep muscle cells intact.

There is no cure for Duchenne - only hope to fight another day.

This is where you come in :

We are looking for sponsors for our first annual car show to improve the quality of life for Quade and many other boy's with Duchenne within South Africa

These boy's love Cars / video games and are highly intelligent - their bodies just deteriorate.

Help us build Quade's legacy and help the family with all the medical expenses in the journey.

*"The cars we drive say a lot about us."*

# Why this event ?

*"Increasing performance  
while decreasing value"*

while a car increases in performance and decreases in value receiving a diagnosis like Duchenne is gut wrenching our boy's lose performance but will never decrease in value
